PROFILE

Frontend Engineer with 5+ years of experience building scalable web applications across enterprise and fintech products. Specialized in React, Next.js, TypeScript, frontend architecture, design systems, and real-time systems, with experience leading teams and establishing scalable engineering foundations.

EXPERIENCE

Dade Amay Datis

Frontend Developer · Full-time · On-site

Mar 2026 — Present

Tehran, Iran

- Built the frontend platform from the ground up as a **Turborepo monorepo**, establishing a modular package ecosystem with **versioned** packages via a private **Nexus registry**.
- Optimized a **performance-critical** page through bundle analysis and code profiling, improving the **critical rendering path**, eliminating **main-thread bottlenecks**, and enhancing **Core Web Vitals** validated with **Lighthouse**.
- Hardened token **security** by moving sensitive credentials to server-side **Redis** storage, keeping tokens out of the client and reducing exposure across the application.
- Improved frontend scalability through granular package exports; **established shared development** and quality standards with **Storybook**, TypeScript, ESLint, Prettier, Husky, MSW/Faker, and bundle-size monitoring.
- Architected a framework-agnostic **Design System** with a unified component API, **decoupling** applications from underlying UI libraries.

Digikala Group (Optime AI)

Frontend Developer · Full-time · On-site

Mar 2024 — Mar 2026

Tehran, Iran

- Resolved a **critical React Leaflet performance bottleneck** by using **Web Workers** to offload **WebSocket GPS data** decompression and transformation, eliminating **main-thread blocking** while rendering thousands of coordinates.
- Optimized **map rendering** for **3,000+ location pins** with complex polygon overlays, resolving **critical performance bottlenecks** and improving user experience.
- Built an automated **Playwright E2E testing pipeline** with **CI/CD** and **Sentry monitoring**, improving AI, backend, and frontend reliability while reducing **production incidents by 35%** and **customer support overhead by 20%**.

Tehran International Complex (TIC)

Frontend Developer · Full-time · On-site

Mar 2022 — Mar 2024

Tehran, Iran

- Engineered a **data-intensive analytics and reporting platform** with **GoJS network visualization** supporting **500+ nodes** and D3.js analytics; optimized **parsing, layout, rendering, and real-time synchronization**.
- Developed a **Mapbox GL PWA** for **real-time GPS/video attendance** with **geofencing**, **WebSocket tracking**, and route playback.
